

Page 1:

In the name of God, thanks to God for everything and prayers for the Prophet of Prophets.

The forces must have significant steps before spring, which the enemy will see as routine and symbolize a cover for the great movement (Hamas)

This is something that must be ensured to happen, especially in places where there will be (the attacks), the real movement.

– **The explosive photos:** You must confess and release photos that explode emotions and lead to the motivation of our people in the West Bank and also inside (Israel) and Jerusalem, and avoid explanations when calling for investigations. And to the same extent you will explode emotions and scare the enemy.

It is necessary to ensure that those responsible have documented the above events. And publish it soon.

Shooting soldiers in the head at point blank range, slaughtering some of them with a knife, exploding tanks, the prisoners while they are in a kneeling position with their hands extended above their heads.

– **Scary events and images:**

There must be images, some of which are planned in advance to produce scary images.

A number of car bombs that will explode in a building or place, causing terrifying destruction, and a heart-warming sound, and a burning fire.

Page 2:

Some five or six pictures of this kind, we will not leave a single one with a heart between their ribs (the intention here is that we will not leave them alive), and God will come to them from where they least expect it and put fear in their hearts, and we need to organize 2 or 3 actions, to burn down an entire kibbutz, or something similar that will cover the place with fuel, (something with the children is incomprehensible) and burn the place down, and broadcast the pictures.

Opening the gates: for the entry of the forces in the above locations and also for the people to enter later, which requires taking control of more than one location at first, at least one in the north (Erez Gate), and one in eastern Gaza (Nahal Oz), and the third opposite the center, which, upon completion of the first wave, requires the bulldozers to advance to open the gates and remove the obstacles and disrupt the roads, and in the second wave, these bulldozers will begin removing all the checkpoints and fences, etc.

Entry of the forces: After 10-15 minutes from the start of the attack, there is no choice but to jump in more forces from a previous plan, to as many places as possible.

This should be according to clear instructions, and planned in advance, with each officer prepared with a plan for jumping in the forces, and distributing them, and continuing with them and leading them.

Page 3:

According to the central instructions from the array commander and the central activities commander:

The plan has steps and waves, the first is the first attack.

There are also steps number two, three and four..

Each of the waves is known, and its pages and maps are ready and available.

This depends on the district commander, political developments and the capabilities of the event.

An order will be issued to the force commander to activate his selected force.

The objectives of the officer (commander) of the North (the Strip) should be towards the coastal strip, and the objectives of the commander of the Gaza region towards the northeast to certain degrees, and medium objectives towards the northeast more than the objectives towards the east, and the officer of Khan Yunis towards the east.

The officer of Rafah towards the southeast, the group of objectives for each officer will be ready and known and according to the order, the closest and most important is wave 2 and then wave 3 and so on....

Page 4:

Those responsible must tell about waves 3 and 4. As the forces enter and consume each other, to reduce misunderstanding, uniform and well-known ribbons must be worn by all forces in order to hold them during the activity. Each force must wear a ribbon on their right arm as a sign indicating a name or affiliation such as (Quds Force.) The offensive readiness to expand the attack as much as possible:

The signs can begin and there is a situation where there will be organizations of Israelis in Jerusalem and the West Bank. They will also be on the attack and therefore we must be ready to expand the attack as much as possible, and during the danger we must demonstrate control over the centers of power and give control to the most important forces.

It is possible to send forces to populated places (settlements), but our forces must concentrate on important objectives...

The plan must include that the force commanders will advance to a pre-agreed place to manage things and the responsible persons or their deputies must participate.

To study the means of communication, with a large area for the powers to seize control and finish the entire front of the resistance and get their hands on the military capabilities, if we are not prepared to take advantage of this opportunity until the last quarter of it, because it is possible that the enemy will launch an outburst, and bring about an external reaction and everything will turn against us in the worst possible way.

Therefore, there is no escape from preparing for a situation of raid and development of the attack and its expansion and intensity to the extreme within the first 6-10 hours to dictate the greatest minutes on earth so that no attack in response will be possible at all.
